

Patent claims

1. An attachment plate (2) of a flexible, bendable material adapted for attachment to fabric, cables, flower stalks or similar items, the attachment plate having two tongue shaped portions including a first tongue (4, 20) and a second tongue (6, 21) formed by a perforation in the plate so that a foot portion (8, 9) of each tongue shaped portion is held to the plate while each respective tongue shaped portion, extending from the foot portion to an outer free end (10, 11; 22, 23) of each tongue shaped portion, respectively, is outwardly bendable from the plate and the outer free ends of the tongue shaped portions are immediately adjacent to one another at a slit (12, 24) formed by a perforation, characterized therein that the outer free end (10, 11; 22, 23) of each respective tongue shaped portion (4, 20; 6, 21) has at least one narrowing portion (14, 14'; 15, 15') so that each respective narrowing portion is adapted to at least partially overlap the other narrowing portion at the slits (12, 24).

2. The attachment plate according to patent claim 1 characterized therein that the outer free end (10, 11) of each respective tongue shaped portion (4, 6) has at least two narrowing portions (14, 14'; 15, 15').

3. The attachment plate according to patent claim 1 characterized therein that immediately adjacent to one another the tongue shaped portions (4, 6) form a wave shaped slit along the formed slit (12).

4. The attachment plate according to patent claim 1 characterized therein that the outer free end (22, 23) of each respective tongue shaped portion (20, 21) has a continuously narrowing portion so that the formed slit (24) has a substantially straight, diagonal extension (D).
